- Silver S9X1
- American Standard S9B1
- A952V
- A951X

▶ KIT MODEL NUMBERS:

See table

FER Coil Kits will be available soon! These kits are to facilitate the combination of American Standard Heating & Air Conditioning and Ameristar FER compliant, condensing furnaces with 4GXC and 4MXC evaporator coils. The MAY*FERCOLKITA kits come with a metal heat shield, installation instructions, and required items for install. Kits are available in each coil cabinet size and **must be used when installing a 4GXC or 4MXC with one of the listed furnace families.**

Note that this does not affect American Standard or Ameristar non-condensing furnaces, legacy condensing furnaces, or condensing downflow models.

Please reference the FER Coil Kit announcement by clicking [here](#) for more information on when an FER Coil Kit must be used. Installer’s Guides and Service Facts will be updated to reflect this information and can be found on ASDealerNet.
