

Temporary Model Number Changes

eAPB2026 | NOVEMBER 5, 2020

IMPORTANT DATES

First Production:

November 9, 2020

First Ship:

As current models are depleted from inventory

Increased demand is placing a strain on compressor supply. To ensure stable production and to improve product lead times, we will re-activate prior model numbers as shown below. These prior model numbers use different compressors which are more available at this time. Note that two new model numbers will be created: 4A7A3036H1000**PA** will temporarily replace 4A7A3036H1000**NA** and 4A7A6036J1000**BA** will temporarily replace 4A7A6036J1000**AA**

Important Notes:

1. This is a temporary re-activation. A new bulletin will be issued around January 2021 to communicate when production will return to the current model number.
2. There is no change in AHRI Ratings between the new and old models. AHRI ratings stop at the 9th model digit which is unchanged between the new and old models.
3. Replacement parts for the prior model are still active and valid in the system.
4. Pricing between the new and old model numbers are the same.
5. Please note the differences in breaker sizing. The breaker size is the same as the original models, the bulletin is just highlighting a difference between the old model breaker sizes, and the current production breaker sizes.

RATINGS:

AHRI ratings available at AHRIDirectory.org

New/Prior	Current Production Model # (From)	New/Prior Model # (To)	Current Breaker	New Breaker
New	4A7A3036H1000 NA	4A7A3036H1000 PA	30	35
Prior	4A7A4024L1000 BA	4A7A4024L1000 AA	20	25
Prior	4A7A4060L1000 BA	4A7A4060L1000 AA	45	50
Prior	4A7A6024J1000 BA	4A7A6024J1000 AB	20	25
New	4A7A6036J1000 AA	4A7A6036J1000 BA	30	30
Prior	4A7A6061J1000 BA	4A7A6061J1000 AA	45	50
