Software Version 5.5
for Connected Controls

BUILT TO A HIGHER STANDARD™
American Standard
HEATING & AIR CONDITIONING

eAPB1905 | January 18, 2019

IMPORTANT DATES

Over the Air Upgrade begins: January 17th

American Standard is pleased to announce the release of software version 5.5 for the following connected controls:

- ACONT824
- ACONT850
- AZON1050

All 824, 850 and 1050 controls connected to Nexia smart home will be upgraded to version 5.5 software between **January 17th and January 30th.** The upgrade process will begin by upgrading a small number of controls on January 17th and progressively increase the number each day until all connected controls are upgraded.

Version 5.5 software includes the following:

New Feature

- Energy saving options

Improvements

- Bug fixes
- Nexia Diagnostics fixes

A message advising homeowners about the new energy saving options will appear on each control's home screen immediately following installation of the v5.5 upgrade. The message will only appear if scheduling was not enabled prior to the upgrade. Selecting one of the new energy savings options is as simple as pressing the option desired or pressing cancel to return to the home screen.

CLICK HERE to learn more about the new energy saving options that are simple to set up.

In case you missed it ...

The previous software version 5.4 featured remote temperature sensor averaging for multiple zones with a 1050 control. Click Here for information on remote sensor applications and be sure to download the new ZSENS930 installation and user guide for use with v5.4 software and higher.
