

INTRODUCING: THE NV SERIES

BUILT TO A HIGHER STANDARD™
American Standard®
HEATING & AIR CONDITIONING

Re-Naming of Ductless Products

To enhance our ductless branding efforts, we will be re-naming the co-branded ductless products to Nv-Series. American Standard co-branded with Mitsubishi Electric on ductless products will give your customers a premium solution to ductless applications. As with any product, there are bound to be maintenance, service and warranty calls. When a home owner searches for a contractor to work on the unit using our model number, they will find only American Standard contractors. Our market research has shown that co-branding generates more leads for ductless. Having product direct from the factory with the American Standard brand helps maintain our quality standard. As we develop new products with Mitsubishi Electric, these will further integrate our unified brand.

How this benefits you:

In many markets there are multiple distributors selling Mitsubishi Electric today. Contractors can shop the price for a project quickly by picking up the phone or online. By changing model numbers and nomenclature, American Standard will be able to build its unique value position in the market and avoid a price war. A unique model number for American Standard will help with future development and sales with Nexia, furnaces and coils, and any other co-developed products in the future. The joint venture with Mitsubishi Electric will bring industry leading solutions now and into the future.

» **TIP:** Use the model number table on the following pages. This can be used as a cross reference when ordering American Standard Mitsubishi products.
